

After Care

STEP BY STEP AFTER CARE TO LOOK AFTER YOUR NEW TATTOO

DO'S

Leave bandage on for 2-3 hours or as instructed by your artist

Always wash your hands prior to touching your tattoo.

Clean your tattoo with antibacterial soap (i.e. Germisidin) 3 times per day during the first week. Gently pat with a clean towel and let it dry.

After a couple of days, you can start using cream if desired.

Choose breathable clothing

DON'TS

Do not scratch the skin, soak the skin in water for too long (No bath, swimming pool etc.. whilst the tattoo is healing).

Avoid UV exposure during the healing, then use broad spectrum sunscreen.

Second Skin

If your tattoo is bandaged with Second Skin, keep the bandage on for 3-4 days max. During this time, it is normal to see some fluid build up beneath the bandage. If the bandage begins to leak, you must remove the bandage and follow the standard aftercare instructions. Remove the Saniderm bandage gently under warm running water. To take the bandage off you must stretch from each side

FAQ

WHAT HAPPENS AFTER ONE WEEK?

By now, any scabs have hardened and will begin to flake off. Don't pick at them or try to pull them off. Let them come off naturally. Otherwise, you could pull out the ink and leave scars.

At this point, your skin may feel very itchy. Gently rub on a fragrance-free and alcohol-free moisturizer several times daily, to relieve the itch.

HOW DO I KNOW IF MY TATTOO IS INFECTED?

Some signs of infection include: persistent swelling, redness, rash, or bumpy skin around the tattooed area. If these symptoms persist or worsen after a couple of days, it's crucial to consult your tattoo artist or a healthcare professional.

HOW LONG DOES DOES THE HEALING PROCESS TAKE?

It may take 3-4 months for the lower layers to heal completely. By the end of your third month, the tattoo should look as bright and vivid as the artist intended.

WHEN CAN I GO BACK TO TRAINING?

It's essential to give your new tattoo time to heal before resuming your regular training routine. Generally, it's recommended to wait at least one week.
